Company profile

Giglioli Fabrizio and Medcom srl were born in Rovereto sulla Secchia in the north of Italy in the centre of the Italian production of plastic devices for the medical and biomedical sectors, with the objective of providing high quality products.

Giglioli Fabrizio was born in 1989 inside the garage of his family house with a couple of small moulding machines. Over the following years with the collaboration of a local company (Lameplast) an establishment of 300 m² for the production, where the company moved, and a warehouse of 150 m² beside it were purchased in 1993 and in 1994 was introduced a laboratory in 10 Battisti Street to add new machines.

During 1999 the company moved again for further expansion of its machines fleet and division of the departments "Assembly" and "Moulding" to 36 and 1/A Carducci Street.

Giglioli Fabrizio srl - lavorazioni materie plastiche (Giglioli Fabrizio Ltd – working plastic materials) founded in 1989 and became Ltd in 2013 is a client-oriented company which offers:

Production of moulded and pre-assembled components for medical and pharmaceutical devices, also on specification by the client with exclusivity for the client

Production and distribution of medical devices for:

- draining systems
- suction tubes
- thoracentesis and paracentesis kits
- bags for urine and waste
- system for the measurement of hourly diuresis "Misuro"
- suction/aspiration cannulas
- wash sets
- accessories for medical devices packaged in blisters
- production and assembly of medical devices on client request
- small bottle with or without serigraphy / labeling

The production area of Giglioli Fabrizio are subdivided into 2 macro areas, 1 for 'moulding' of about 2100 m² and 1 for 'assembly' of about 700 m², both situated in Rovereto sulla Secchia, a few metres from each other.

All our productions are performed in clean rooms certified ISO 8 which are designed and created with techniques able to satisfy the clients' quality requests through the use of modern and advanced constructive techniques.

In the moulding area there are n°12 moulding machines with a closing pressure of 40 to 200 tons. , 3 injection-blowing machines, 2 injection-stretch-blowing machines for PET and 3 extrusion-blowing machines.

In both departments the packaging of the product is done in a dedicated clean room in order to optimize the cleanliness and the quality of the work.
