the creative know-how

our

values

Our company is established in the historic Quercy region in France's southwest, an area whose know-how and tradition has contributed to its past and present strengths. **Since 1948, G. Pivaudran has been designing and creating high-quality, custom-made and innovative metal articles** for the global perfumery and cosmetics market. Our strategy and development are inspired by a manufacturing tradition that enables us to anticipate, address and meet all your requirements. **Quality of service and confidentiality.** We immerse ourselves fully in your manufacturing challenges and are very effective in our confidential and creative approach to controlling and optimising costs.

Quality of innovation

We are constantly willing to innovate, and with our independent technology, able to design, create and develop the processes and machines required for each project. We are also innovative at the logistical level with the implementation of **customised solutions**.

Past, present and future

We combine 60 years of know-how and the **process of continuous improvement** is deployed in all departments of the Company (training of staff, reliability of developments, process optimization) is the best guarantee of success.

Independence and openness

We operate through the blending of skills: **partnerships based on people, know-how and service**. The undeniable advantages of this choice are receptiveness and reactivity, greater flexibility and rapid communication. **We can deal with all types of complex projects** from top of high end products as well as mass market products, and from the smallest to the largest production runs.

Combining know-how and innovation, associating quality and service, ensuring clarity and confidentiality, these are the challenges that our teams rise to on a daily basis in order to meet your requirements regarding development and production.

Development

In close collaboration with your own specialists, creation of drawings, models and tools is carried out on CAD/CAM associated to our machine tools and fast prototyping. Our Improvement team then joins the project and in addition the Quality team is involved from the earliest steps in order to ensure the very best results.

Deep-drawing

High production rates are ensured due to transfer and semi-automatic presses, flexible lines and automated machines.

Surface treatments

This modern and functional unit offers a wide range of finishes through polishing on CN machines, multicolour anodizing on automatic and manual lines. New materials and the latest treatments (like double anodization) allow real differentiation of your products.

Finishing

Assembly, multiple decoration (silkscreening, hot stamping, ...) or laser engraving are carried out using automatic machines designed by our industrial workshop.

Supply Chain

All these operations are linked together and planned using a powerful ERP. Associated to our internal network, it is the guarantee of fast information flows and a reliable and regular contact with your teams. Full service, of course, from the first steps in design through to the setting up of a dynamic supply chain.

All our process steps are designed to be environmentally friendly through the use of our pollution control and recycling station.
