

INJECTION STRETCH BLOWMOULDING

Spectra continue to satisfy an ever increasing need for PET clear plastic bottles by meeting market demand with the highest quality containers - available in a range of sizes and styles to best suit customer's requirements.

Installation of new injection stretch blow moulding production lines means Spectra can confidently meet market needs. The company's standardised machines produce outstanding quality PET containers in a variety of sizes from 25ml up to 500ml capacities. What's more, a number of stylish finishes, including frosted PET, can also be achieved, while a range of colouring options is virtually limitless.

Strong yet lightweight, Spectra's extensive PET range offers robust barrier properties for product protection and superb glass-like clarity which is perfect for displaying products in their best light. PET also has the added environmental benefits of being more readily recycled, a major consideration for both Spectra and its customers. Spectra can also go one step further by moulding from recycled PET.

WHAT IS INJECTION STRETCH BLOWMOULDING?

Injection Stretch Blow Moulding is the process of manufacturing high quality and very high clarity bottles. The plastic is melted and then injected into a mould to form a preform. The preform is then pre heated before being held inside two halves of a mould.

When the preform is inside it is then inflated using high pressured air while simultaneously being stretched. While the plastic is inside the cavity, the plastic will freeze off to the desired shape as it is forced against the inside walls. The mould halves will then open releasing the bottle so that the process can be repeated.

WHAT ARE THE BENEFITS OF PET AS A MATERIAL?

PET (Polyethylene Terephthalate) is ideal as an alternative to glass bottles, offering a number of packaging advantages such as excellent clarity, as well as barrier characteristics against carbon dioxide and oxygen. With PET lighter weight bottles can be made and this material has a High breakage resistance to avoid risk and injury. PET is also suitable for recycling.

TUBULAR RANGE IN PET

Ranging from 50ml up to 500ml capacities, these PET Tubulars are superb for many market sector packaging opportunities. Incorporated within the range there is also a wide choice of Non-Aerosols to complete the collection.

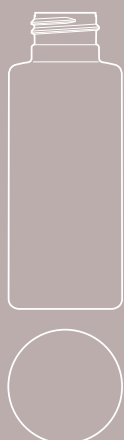

50ml TUBULAR

Bottle Reference	1003
Brimful Capacity	58ml
Height	87mm
Diameter	33mm
Neck Finish	20/410

CLOSURES FOR THIS BOTTLE

Suitable for use with any standard
20/410 fitment

NECK FINISHES EXPLAINED

When choosing your bottle you will need to decide which neck best suits your products and choice of cap. The neck finish is normally signified by two numbers - for example 20/410, 20/415, 24/410 and 24/415. These two numbers represent the outer diameter of the neck opening (mm), the thread configuration and height of the neck. Once you've chosen your bottle you can then choose from closure styles that have the same numbers. Below are the neck finishes and the appropriate cap options.

20/410 NECK

Suitable to take any standard 20/410 fitment

20/415 NECK

Suitable caps to fit this neck:

- 3013 20/415 Tall Radiused Capsee page 131
