

SuperLight™

SuperLight™ is ideal for dairy products. The range makes you spoilt for choice: you can choose from more than 20 different cups, two types of plastic and several types of lids with add-ons.

Key Benefits

- Ultra-light material with impressive strength
- Reduced carbon footprint
- Many types of lids
- Optional add-ons in lid: cutlery and/or crunch
- Membrane sealing
- High-quality decoration with IML and off-set
- Premium visual appeal
- Decoration of curvy shapes with shrink sleeves

SuperLight™ is perfect for the dairy segment

The SuperLight™ range offers several options for a perfect packaging solution for the dairy segment. It encompasses over 20 sizes from 100 ml to 500 ml. Choose from three diameters: Ø 75 mm, Ø 95 mm and Ø 116 mm. The SuperLight™ cups come in two types of material (PP and PS) and for all varieties, membrane sealing and UV-light barrier are available. Make your choice between a slightly rounded bottom and a sharper one.

Lids to your liking

For the lid there is a variety of colours, including transparent ones. The regular PET lid is available with offset print, may be preprinted and/or with stickers. For the regular lid in PP, decorations can be made with in-mould labelling.

On-the-go option

Why not choose the optional lid with cutlery or even a compartment for topping, be it crunchy or liquid? These on-the-go solutions have lids that come with a peelable label.

Shrink sleeves, IML or offset

Pending on the material, you can have your cup decorated with shrink sleeves, in-mould labelling or offset. The excellent printing quality and the high resolution of our shrink sleeves will give your product a premium visual appeal and their flexibility curvy shapes and even decorate grips. With IML, you get an outstanding image resolution for the entire artwork design including your brand. Also with off-set decoration in up to eight colours your product will look fantastic on shelf.

A sustainable choice

In terms of production, SuperLight™ limits the amount of raw material and the manufacturing method is also environmentally responsible. Its light weight reduces the energy consumption during transportation, making SuperLight™ a particularly sustainable packaging solution. dimensional reliability. Also, the improved stacking options will improve your supply chain efficiency.
