

UN Series

UN Series – based on the existing packaging solutions from Berry Superfos this special series meets UN safety requirements for transport of special kinds of both solids and liquids.

Key Benefits

- Perfectly suited for oils, lubricants, grease, chemicals, etc.
- Optimum security and reliability (UN approved)
- Liquid tight
- Low noise on filling lines
- Light weight for easy handling and transportation
- Robust design reducing packaging waste and optimising storage utilisation
- External diameters perfectly optimised to pallets
- Harmonised packaging design
- High-quality decoration options

UN approved

For the transportation of sensitive goods the containers in the UN Series are a perfect match. This special range consists of UN certified containers for chlorine, oil, lubricants, adhesives and the like - both solids and liquids.

Optimal security and reliability

The UN Series is for customers requesting high quality plastic containers meeting the strict demands set out in the UN approval procedures. The UN Series offers optimal security and reliability and is specially developed for the packaging of solids and liquids in group II and III. All containers in the range are based on our existing packaging solutions and consist of UN Hobbock, UN SuperLift Extra, UN SuperFlex, UN SuperCube Square, and UN SuperSafe.

UN SuperSafe with two lid types

UN SuperSafe is available with two lid types which both fit the same packaging body. An integrated standard lid, which can be opened in the pouring spout only, provides for a perfectly tight and sealed packaging solution.

Another lid has a visually clear safety tear-of-band throughout the external diameter of the container. This is a convenient solution if you want to get the benefits of using the same container body for your other goods which do not need UN approved packaging. This lid type can be entirely removed thanks to the safety tear-of-band, making it easy to stack the empty containers and save storage space.

Child proof UN approved lid for UN SuperFlex

Berry Superfos also offers a unique solution in the form of a child proof lid in the UN SuperFlex Series. The child proof lid is available for UN approved containers with a diameter of 222 mm and is suitable for products for the swimming pool. The lid is approved in Europe according to the NF EN ISO 8317 standard. It is impossible to open for children under 51 months (just above 4 years old) while it is easy to open for adults including seniors.

All the UN approved containers can be delivered in many different sizes from 3 litres to 32.2 litres. They have functional details and offer ample opportunities for great branding on the packaging, as it is the case for all other packaging solutions from our container range.
