

SUNFILM®

PLATINUM

Enhanced Protection for silage bales

Manufactured using advanced multi-layer blown extrusion techniques, Sunfilm Platinum is the best for problem-free wrapping.

Sunfilm Platinum has been developed for the newest balewrappers and combi-balers. Just like Platinum, the film is adaptable and flexible, UV resistant and has a stretch of up to 70%.

When wrapping with 50% overlap and using 6 layers, Sunfilm Platinum is also hard-wearing, with enhanced bale protection and more tear resistance. Ideal for bales with moisture content of 40% - 60%, Sunfilm Platinum is reliable, and durable.

Film dimensions:

750mm x 25µm x 1500m

Film & Film Wrapping

Combi-wrapper technology allows for the replacement of netwrap with Suntight baler film, producing a tightly packed, dense bale of greater shape.

Silage bales wrapped with Suntight and then SunFilm Platinum will further benefit from an enhanced oxygen barrier, greater puncture resistance, and tear resistance.

Making round bales using the Film & Film wrapping system ensures that bales can be opened easily. With no fodder becoming enmeshed, bale opening can be completed efficiently. Using either mechanical or manual techniques, no fodder is wasted.
