

Getting light, right

This high yielding film can create an optimum growing environment by actively managing light transmission, diffusion and temperature. Benefits include:

- Extending seasons
- Hardier crops
- Enhanced crop quality
- Temperature control
- Anti-fog properties

In bedding plants where uniformity and colouration are paramount, Lumisol excels.

Lumisol is perfect for producing compact, hardy seedlings.

For cut flower varieties in which stunning colour is everything, there's no substitute for Lumisol.

Lumisol could help speed up time to first pick, improve colouration, taste, fruit firmness and shelf-life.

Horticulture films that enhance quality and yield
