

Refillable PCR Airless Bottle for beauty products

PCR Airless Bottle

Your current packaging as reusable shell

Utilizes post-consumer recycled resin
Fits with any existing airless pack
Cuts 70% plastic consumption

PCR Airless Bottle enables brands to claim sustainability instantly and effortlessly.

Without changing the authentication of the packaging, simply replacing the conventional syringe airless bottle with **PCR airless bottle**, brands can claim the use of **Post Consumer Recycled** material.

A wide range of stock bottles in different sizes are available. No tooling is needed.

SRP provides samples in 1 week, and production delivery lead-time in 6 weeks.

Claim Sustainability

Applying PCR Airless Bottle to a current product line is the swift and cost-effective transformation to help brands stand in line with sustainable schemes.

Ease-of-use refillable packaging design

PCR Airless Bottle ensures a vacuum-sealed environment to protect preservative-free formulae.

While enjoying a natural-based product, consumers also experience the ease-of-use refillable packaging design that costs less and contributes to one's effort in standing against plastic pollution.
