WHY Nozzle Tubes?

FOCUSED APPLICATION

Nozzle tubes, or needle-nose tubes, come in various shapes and aperture diameters adapted for numerous usage and purposes targeting specific areas.

Most well-received products like eye creams, anti-wrinkle serums, flawless concealers, acne treatments, and first aid ointments, all benefit from the pinpoint application of nozzle tubes.

- * ***Controllable dosage***
- * ***Mono-material recyclable design***
- * ***Budget-saving solution***

How the packaging visual design appeals to consumers is important, and “how to use” is key to making users stick to a brand.

More than just a protection to the formulae, the tubes with nozzle heads help users control the dosage with a light squeeze to enjoy a neat, mess-free treatment and application.

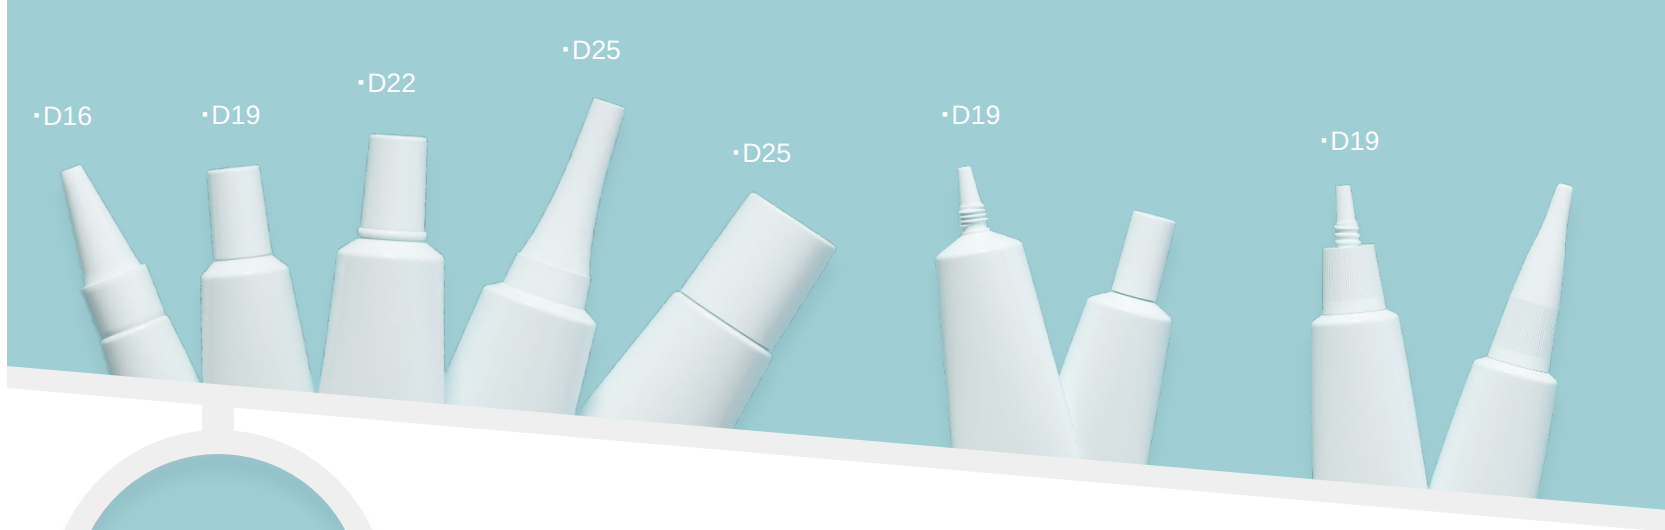

Matched with PE closures the mechanism is so simple that the entire tube is mono-material and recyclable.

With a small change to the packaging option instead of spending a big budget on project planning, Nozzle tubes benefit both brands and consumers by providing the utmost user experience.

Wide range of options

Select from the ready-to-launch nozzle tubes, and ensure the desired style is compatible with the about-to-launch formulae.

ST-08 Series:
D16, D19, D22, D25

ST-02 Series:
D19

ST-13 Series:
D19

D13, D16, D19, D22,
D25, D30

ST-21 Series:
D35

Brand requests,
SR Packaging fulfills.

Nozzle tube customization

While none of the stock options satisfy a project requirement, SR Packaging offers total customization services.

Working from scratch, the team provides concept design, mold-tooling, and decorating to help brands make conception a reality.
