# PACKAGING YOUR BRAND

PRODUCT CATALOGUE

[www.repli.es](http://www.repli.es)

# DEAR CUSTOMER,

How you want to package your products is the key issue for us. PET Power will be happy to help you find the optimum packaging solution. There is a reason why our slogan is 'Packaging Your Brand', because our new catalogue is full of well known, traditional, new and innovative packaging with complementary caps and closures. Above all, the catalogue is a visual feast. Through 'Your Brands', we offer you the inspiration to find and decorate the ideal packaging to suit your customers' experience.

Each year, PET Power continues to expand its product range by adding new designs and applications, while at the same time working on new materials such as Biopet, Tritan® and Post Consumer Recycled material are examples. PET Power often has the pleasure of working with customers on the development of customised solutions - packaging that gives your brand its own unique identity. Our specialists will be happy to help you explore the possibilities. PET Power has become part of the global packaging concern called RPC Group, therefore opening up countless additional options for you for high-quality, innovative solutions.

While the catalogue offers a magnificent initial overview of our packaging solutions, additional information is also available from our interactive website at [www.petpower.eu](http://www.petpower.eu) where you yourself can try out caps and closures for jars and bottles and also request samples. There is also news on product launches and our presence at trade fairs and seminars. We publish the latest updates in our newsletters - you can subscribe via our website. Above all, however, we believe that success depends on personal contact. Send us an e-mail via the website to make an appointment for a guided tour of the factory. All PET Power employees are ready and waiting to join you in discovering or developing the ideal packaging.

Looking forward to meeting you soon.

Kind regards,  
PET Power BV

# ABOUT PET POWER

In 2015, PET Power was taken over by the RPC Group and became part of the M&H division. The RPC Group specialises in packaging companies. Listed on the London Stock Exchange, apart from the M&H division, the group also includes companies such as RPC Superfos, Global Closure Systems, RPC Ace and RPC Bebo. RPC is a cash-rich group that offers the group's subsidiaries an extensive degree of autonomy. PET Power is the RPC Group's specialist in PET packaging. RPC and its extensive network give us the opportunity to tap into and grow new markets, and to invest even more in innovation.

## SUSTAINABLE & SOCIAL RESPONSIBILITY

Sustainability is in PET Power's DNA. It is basic to how we think and act. Control of our own energy consumption is one area in particular where improvements are constantly being made. PET Power also works with BioPET and PCR plastic material (Post-Consumer Recycled PET). The entire organisation is always on the lookout for ways to make our organisation, processes and procedures more sustainable. We reward employees who propose improvements in sustainability, and we choose our suppliers based on sustainability criteria. Customers can count on a sustainable PET Power happily sharing advantages and examples with business partners.

### Personal committed

Just like any other company, PET Power is not an island. We are aware of our societal and social responsibilities at local, national and international levels. That's why PET Power has supported two charitable causes for many years. The first is the Plastic Whale initiative, which fits in perfectly with our thoughts on sustainability. This organisation shows that as an individual you can really make a difference to improving the environment. Plastic Whale focuses on solving the problem of the plastic soup in our waters under the inspiring leadership of founder Marius Smit. More information about this initiative can be found at [www.plasticwhale.com](http://www.plasticwhale.com).

PET Power is also very keen on the Stichting Duchenne Heroes foundation. This foundation raises money for research into the children's disease Duchenne muscular dystrophy (DMD). DMD is a rare illness that occurs mainly in boys and causes muscle problems. Unfortunately, there is still very little known about the cause, and the life expectancy of these children is much too low. If you would like more information about this initiative, go to: [www.duchenne.nl](http://www.duchenne.nl) or [www.duchenneheroes.nl](http://www.duchenneheroes.nl).

### PET Power

### RPC Group

● Countries with RPC offices

€ more than **50 million** turnover

€ more than **2.6 billion** turnover

3 production sites

more than **100** production sites

more than **260** employees

more than **20,000** employees

more than **50** ISBM machines

ISBM, IBM, IM, EBM and much, much more

# OPPORTUNITIES AND BENEFITS

## CAPS & CLOSURES

- A matching closure for all neck types
- Pumps, sprayers and foamers
- Different possibilities for first-time users
- Multiple solutions with liners and seals

33 different neck diameters from 12 mm to 150 mm

More than 240 different basic shapes (pre-forms)

## CERTIFICATION

- BRC certification
- ISO 9001 certification

Working according to the strict RPC quality and safety guidelines

Volumes from 10 ml to 8,000 ml

## YOUR BRANDS

- More than 700 standard PET bottles/jars
- More than 500 customer-specific models
- 3D design possibilities

## PRODUCTION PROCESS

- More than 55 ISBM machines
- Single-stage and two-stage production
- Various production sites
- 1,200 m<sup>2</sup> cleanroom in Etten-Leur
- Varied machine platforms (for smaller and larger production runs)

## COLOURS

- Can be produced in all colours
- Colour in transparent, translucent and opaque
- 250 standard colours

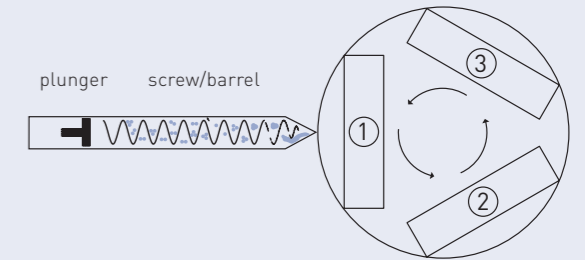

More than 1,300 blow moulds

## PET PROPERTIES

- Transparent and clear
- High-quality, shiny appearance
- Unbreakable
- Good barrier properties (UV, gas, aroma, temperature)
- Stable-quality material
- 100% recyclable
- Easy to decorate
- Very large degree of freedom in designs and modelling
- Easy to combine with PCR

# THE PRODUCTION PROCESS SET OUT IN STEPS

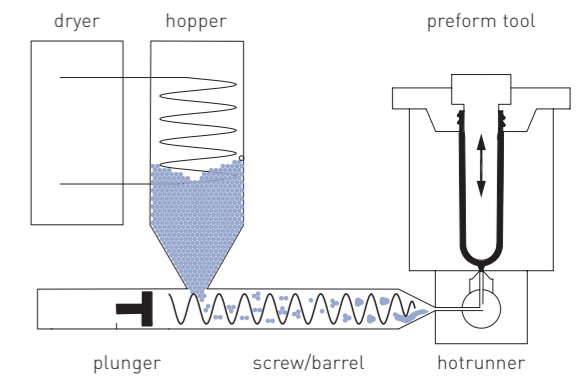

PET Power uses a technology called ISBM for the bulk of its range. This stands for Injection Stretch Blow Moulding. The machinery is equipped for single-stage technology, which means that one and the same machine makes the preform and the final form (jar/bottle). This method is highly suited to both small and large production runs. The entire production process is optimally controlled in this way. With this method, the manufacture of bottles and jars proceeds in three steps.

TOP-VIEW SINGLE STAGE (ISBM)

## STEP 1: To the preform (preform process)

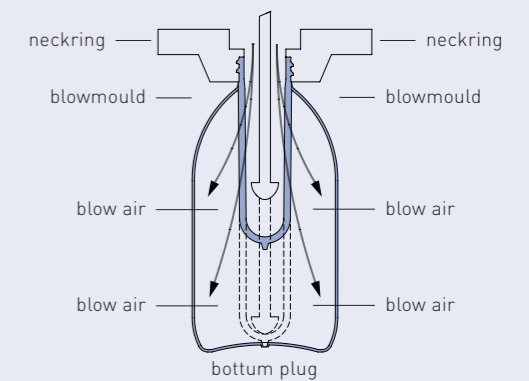

The raw material, the PET granulate, is dried. Then it goes via a screw-shaped cylinder from the drier to the machine. During this transport the granulate grains are strongly heated, as a result of which they turn into liquid PET. In the case of normal PET, the transparent clarity occurs in this phase. Colours are now added to obtain coloured material. The liquid PET is subsequently injected into the first mould, the so-called preform mould. Here the neck of the bottle or jar receives its precise size in one go and the jar or bottle as a whole the correct weight.

SIDE-VIEW STEP1: INJECTION

## STEP 2: To the end form (blow-mould process)

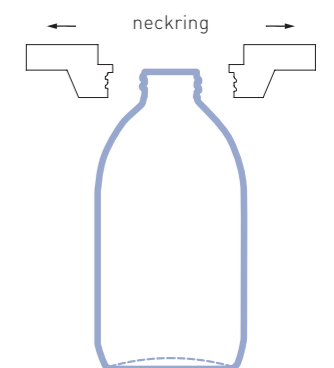

The preform remains attached to the neck that has just been injected to a high degree of precision and then proceeds via a turntable to the next stage. In the case of some machines, this is a stage for conditioning the preform in order to, for example, further improve the temperature profile. In the case of other machines, the preform proceeds directly to the blowing phase. The blow-mould gives the preform its final shape by stretching the workable part under the neck and blowing it out. Stretching takes place by means of a stretching pin, which pushes the material to the base. Due to the blowing the PET shapes against the wall of the blow-mould, as a result of which all kinds of forms and motifs may occur.

SIDE-VIEW STEP 2: STRETCH AND BLOW

## STEP 3: To the end product

The product now goes to the last machine stage. Here the extractor unit places the bottle or jar on a conveyor belt, where a check is carried out. This is the last check before the packaging phase. This may be a visual inspection, a leakage test and possibly additional supervision by camera. The method depends on the nature of the product. After this, packaging takes place according to the agreed specifications. The machines apply codes for storage and despatch.

SIDE-VIEW STEP 3: EJECTION PRODUCT

# MARKETS SUITABLE PACKAGING FOR EVERYONE

## HEALTH CARE

Quality, reliability and precision are paramount for us. PET Power has a 1,200 m2 class 7 cleanroom. All products are packed according to the critical requirements of this market. Europe's largest sterility centre where we irradiate our products on request is located close to PET Power.

## HOME

PET Power is developing packaging for cleaning products, cleaning agents and pesticides, ranging from large to small. You can also come to us for the packaging of toys, lamp oil and many other household applications.

PET Power was already making packaging for more than one thousand companies in industries, including the pharmaceutical, cosmetic and foodstuff industries. We supply customers with high-quality, safe, functional and eye-catching bottles and jars, including matching caps and closures and decoration. As well as the sectors mentioned, PET Power is developing packaging solutions for toys and for chemical and household items. Are you looking for packaging for other applications? Please contact us to discuss the options.

## PERSONAL CARE

Design and innovation are two areas where our designers frequently surprise personal care customers. Standard families give our customers the opportunity to present product families. Furthermore, we deliver the appropriate products in all colours in our large standard product range.

## FOOD

PET packaging for foodstuffs needs to have properties such as ease of use, squeezability and being unbreakable in the kitchen. In addition, light weight and sustainability are important. PET also offers the optimum replacement to glass packaging from which all major European Retailers are keen to move away from.

# PET POWER TAKES YOUR CARES AWAY

In the world of increasing demands from the customer and the world of online shopping you must be able to deliver your products quickly and precisely as required. PET Power helps you. Thanks to our 24/7 production system, we can deliver quickly and flexibly, no matter how large your order. In addition to logistics, we can also offer you support in design, laboratory tests, and much more. You need concern yourself only with the best possible launch for your product.

### Customised work

Differentiating yourself is also possible with a shape that's entirely your own. If you choose completely your own design, our designers will brainstorm with you about every detail: from shape to colour to decoration. Together we will select the best plastic material with a view to the desired appearance, processing of the material and sustainability, and legal rules and regulations. PET Power also has 3D printers to give you an immediate real feel of your chosen packaging from a sample.
