15.04.15

registration evaluation [and] authorisation [of] chemicals regulations  
(and restriction)

As of June 2007 the European Regulation (EC) 1907/2006 entered into force. Ambroplastics manufactures a variety of stationery, presentation & packaging products. Our core materials are polypropylene, PVC & metal fittings all of which are bought in as finished materials. Our main print process is screen printing.

Ambroplastics Ltd does not import, manufacture or chemically transform any substances or preparations.

We have received statements from our key suppliers confirming their awareness of REACH and that they have taken the necessary steps to manage the regulations within their Company. We are not aware of any potential interruptions with supply of the materials.

Two of our key suppliers have confirmed that the products we buy from them contain 0.1% of DEHP (di-ethyl-hexyl phthalate).

The European Union has confirmed that DEHP poses no general risk to human health, see [www.dehp-facts.com](http://www.dehp-facts.com). However the EU directive 2005/84/EC does not permit the use of this product for toys and nursery articles.

Should this change in the future we will take the necessary action to comply with the regulations.
